**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1 & 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Duenas (USPN 6,336,362).

With regards to claim 1, Duenas (USPN 6,336,362) teaches a sensor system comprising:

a sensor power input and an output for supplying a sensor output for supplying a sensor output.

Although the Duenas (USPN 6,336,362) reference does not directly teach having a sensor input and output. Duenas (USPN 6,336,362) does turning off the power to the sensors, therefore it must inherently have a power input in order for the microprocessor to turn it off.

A controller (126;Col. 12, Line 4) including:

A power supply switch for turning on or off supply of electrical power to said sensor input; and (Col.12, Line 4-5 & 25)

A control circuit for receiving and processing said sensor output and for turning off said power supply switch when said control circuit accepts the sensor output from said sensor (126;Col.11, Lines 56-60)

***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance:

Regarding claims 5 and 14:

The primary reason for the allowance of claim 5 is the inclusion of: control circuit for detecting completion of reception of sensor module output and turning off the sensor module power supply switch in response to the detection of completion of reception. It is this feature found in the claim, as it is claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

The primary reason for the allowance of claim 14 is the inclusion of the data line switch controlling power to a data line receiving sensor module output in response to receiving output signal. It is this feature found in the claim, as it is claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 6-13 are allowed due to their dependency on claim 5.

Claims 15-20 are allowed due to their dependency on claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
